To Whom This May Concern,

Most projects fail not for lack of ideas, but due to a breakdown in the "handoff" between design, development, and brand vision. I have spent the last 20 years eliminating that friction.

I am an Independent Contributor with a hybrid background in **UX/UI Design, Full-Stack Development, and Audio Branding.** I specialize in taking "grandiose" concepts and distilling them into high-velocity, high-quality digital products.

What I bring to your project:

- **Engineering-Led Design:** 20 years of building UI/UX that isn't just "pretty," but is architected for performance and scalability. I don't just design interfaces; I build the logic that powers them.

- **Multi-Sensory Brand Building:** Beyond code, I am a composer of electronic music and a creative strategist. I understand how to use audio and visual content to build a cohesive, immersive brand identity that resonates with users on a visceral level.

- **Direct-to-Result Execution:** Having led "Brand of Experts" initiatives, I am seasoned in cutting through the noise. My focus is on **Speed and Quality**— delivering "production-ready" assets while others are still in the brainstorming phase.

I recently transitioned into a purely independent model to focus on partners who value precision and accountability. I am looking for a milestone project where I can apply my full "stack" of creative and technical skills to deliver an undeniable market result.

I've attached my portfolio, which showcases my recent work on **www.omnivoidzero.com**.

If you are looking for a partner who can handle the complexity of a 360-degree digital build without the overhead of a bloated agency, let's talk.

Best regards,

Dan Harkins
